

BREAKING NEWS!!!

DUNGS Combustion Controls

System Control Engineering are proud to announce that they have recently been appointed Northern Area Distributors for DUNGS combustion equipment.

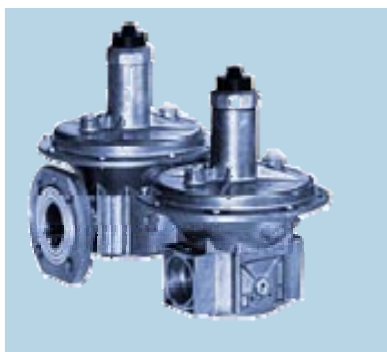

SCE have a long prior association with Dungs products due to their close association with Riello Burners who by default use Dungs control products for their burners. DUNGS products cover a wide range of applications and SCE now hold stock of popular Dungs product lines in their Auckland store. So if you are north of the New Plymouth to Napier line and need Dungs products feel free to contact SCE for friendly assistance.

THE GAS BIZZZ BULLETIN
April 2011

Technical Tip

Safety Systems - Part 2

Following on from last months Gas Bizzz, another popular system is to have strategically placed emergency stop stations installed on site. Used largely in commercial kitchens & laboratories to facilitate emergency shut off of the gas supply. Linked to a solenoid valve in the main gas supply line these manual reset switches give a quick and easy way for staff to make things safe.

They are also used in tertiary educational sites with the E-stop located at the tutor's station, a key lock reset version is available for extra security.

For forced ventilation applications a duct air pressure switch can also be linked to ensure the ventilation system is functioning before gas is supplied to appliances. Each E-stop is supplied with a round emergency stop label. Also available is our red 20cm x 12 cm Gas Emergency Stop sign to clearly identify the function of the E-stop.

Gas Pressure Test Points

SCE have available brass test points for pressure sampling. Essential to ensure burners and gas piping systems are operating at the appropriate pressure therefore ensuring efficient functioning of the combustion process. Available as either individual test points in 1/8" BSPT or 1/4" BSPT. Or as an integral part of a male/female nipple available in 1/2" BSPT or 3/4" BSPT.

IF YOU ARE NOT TESTING THEN YOU ARE GUESSING
